Norton Sandblasting Equipment Stocks the Revolutionary MBX Bristle Blaster

The Bristle Blasting Innovation

- Bristle Blasting is a new process that uses a specially designed rotary bristle tool for achieving both corrosion removal and an anchor profile.
- The rotating bristles are DYNAMICALLY TUNED to the power tool which results in impact and immediate retraction of the bristle tips from the corroded surface.

#716028

- The bristle tips strike the corroded surface with kinetic energy that is equivalent to grit blast media, generating a texture and visual cleanliness that mimics the grit blasting process.
- Bristle Blasting simplifies the surface preparation operation and reduces expense through the elimination of expensive equipment, media and extensive environmental and safety measures.

The MBX® Bristle Blaster Advantage

- The MBX Bristle Blaster offers distinct advantages over conventional surface preparation methods and will yield superior results – with far less time and effort.
- Removes corrosion, coatings, mill scale and other contaminants – without removing healthy material
- Generates anchor profiles ranging from 2.5 to 3.3mil on steel – also on weld seams, edges, around bolts and on surface irregularities

1006 Executive Blvd. • Chesapeake, VA 23320

#716028

- Restores corroded and pitted surfaces to near white metal or white metal appearance - no grinding or polishing during operation
- Improves integrity of treated surface – generates compressive residual stress for crack growth resistance, improved fatigue life and improved corrosion resistance
- Cleans and profiles quickly and economically with long lasting, safe Bristle Belts – eliminating the need for costly abrasive blast equipment
- Suitable for spot repairs as well as larger areas where other processes are prohibitive – does not use/produce environmentally unsafe or hazardous material
